

TERRATRACE INTELLIGENCE REPORT

Case ID: C18
Date Triggered: 2026-09-30
Trigger Source: Automated Monitoring
Status: open

Parcel ID: AP-07-0102-007-00018

Village: Unknown

1. Evidence Summary

Metric	Value	Threshold Assessment
Spatial Mismatch (Cadastral vs Drone)	0%	Within bounds
Boundary Shift	0.0 m	Nominal
NDVI Instability (5yr)	0.3 (Score 0-1)	Stable

2. Boundary Comparison

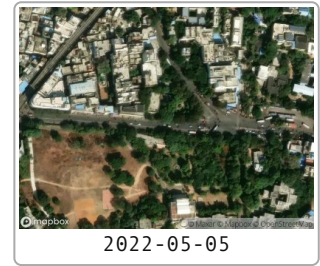

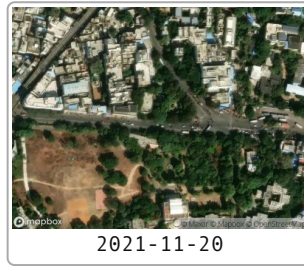

LEGAL CADASTRAL BASELINE

DRONE CAPTURE EXTENT (AI EXTRACTED)

3. Temporal AI (Sentinel-2)

Historical optical backscatter indicates timeline of clearance activity.

4. Pattern Library Inference

Primary Match: Encroachment via Vegetation Clearance

Confidence: 85.0%

The combination of a 0% spatial area expansion along the Northern boundary, coupled with a highly volatile NDVI score (0.3) between Q3 2021 and Q1 2022, fits the signature profile of physical forest clearance preceding boundary expansion.

Rule triggered: SPATIAL_SHIFT_GT_10 AND TEMPORAL_DROP_GT_0.4

5. Officer Verification

Decision: _____

Reasoning: _____

Authorised Signature
